

#### Assessment and Control of Risks for Achieving Safety

UNIVERSITY OF TWENTE. CuriousU, Risk management, Safety by Design, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019

#### About the Teacher

- Safety by Design, MSc course, (course creator)
- Editorial board, System Safety Journal
- Member of standardisation committee for ISO/TC 199 "Safety of Machinery"
- See <a href="https://safety.productions">https://safety.productions</a>
- Contact
  - Tel: 053 489 3278
  - De Horst, W250
  - M.Rajabalinejad@utwente.nl

#### Overview

- Risk assessment and control (safety) by design
  - Scope and issues
  - History and current states
  - Why? When? Where? Who?
  - Ingredients and how to
  - Best practices
- Exercise

#### **IS IT SAFE?**

- Designed by IKEA
- Produced in large scale
- Available in many countries
- See it in action

UNIVERSITY OF TWENTE. Operationeel Risicomanagement & Veiligheid, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019

#### **EXPERIENCE?**

- New technologies
  - Autonomous
  - Complex
  - Uncertain
- Result in "large risks"

UNIVERSITY OF TWENTE. CuriousU, Risk management, Safety by Design, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019

#### Ex Machina!

- Safe guarding is not an option
  - Robotes
  - Cobots
  - Exo-skeleton
  - Servant drones

### Edmond De Belamy

- Trust and empathy?
- \$432,500 fortune for a student who used
  - min G max D x[log(D(x))] + z[log(1-D (G(z)))].
- Isn't this about emotion too?

#### Friend or Enemy?

#### Code of Hammurabi

- As old as men exists
- Code of Hammurabi, 1750 BC, BabylonAs old as men exists
- Code of Hammurabi, 1750 BC, Babylon
  - a tooth for a tooth
  - liability rules
    - A house is built and collapses
       , killing the owner,
       the builder would be put to death

# Ship Safety

- As old as men exists
- Code of Hammurabi, 1750 BC, Babylon
- Commité Maritime, 1897, Antwerp
  - Maritime regulations
  - See <u>http://www.comitemaritime.org/A-</u> Brief-History/0,27139,113932,00.html

#### **Insure Safety**

- As old as men exists
- Code of Hammurabi, 1750 BC, Babylon
- Commité Maritime, 1897, Antwerp
- Safety of Life at Sea treaty, 1914 (after <u>RMS</u> <u>Titanic</u>)
- Safety of Life at Sea treaty, 1914 (after <u>RMS</u> <u>Titanic</u>)
  - Safety equipment have to be in line with number of passengers

RMS Titanic - wikipedia

#### System Safety

- As old as men exists
- Code of Hammurabi, 1750 BC, Babylon
- Commité Maritime, 1897, Antwerp
- Safety of Life at Sea treaty, 1914 (after Titanic)
- System Safety 1950-1960
- "System Safety Engineering: Military Specification for the Development of Air Force Ballistic Missiles.", 1962, US Air Force

#### System Safety

- As old as men exists
- Code of Hammurabi, 1750 BC, Babylon
- Commité Maritime, 1897, Antwerp
- Safety of Life at Sea treaty, 1914 (after Titanic)
- System Safety 1950-1960
- "System Safety Engineering: Military Specification for the Development of Air Force Ballistic Missiles.", 1962, US Air Force
- Unsafe at any speed, 1965, Ralph Nader
  - Volvo, 3 point seat belts GM, airbags

#### Accidents

- They are often suddenly, unexpected, unwanted
- Have multiple causes leading to injuries, damage
- Are counted by number of accidents, victims, injuries,...
- Counted by ER (Emergency Rooms), CBS, Eurostat,...

#### Hazard-To-Accident

Deaths 1990 (95% UI)	Leading causes 1990		Leading causes 2016	Dei (95	eaths 2016 5% UI)	Percentage change in number of deaths (95% UI)	Percentage change in mortality rate (95% UI)
5463 (5112 to 5899)	1 Road injuries	]	1 Road injuries	1	500 (1130 to 1696)	-72.5 (-76.4 to -68.4)	-67·7 (-72·3 to -62·9)
4208 (3926 to 4507)	2 Drowning		2 Lower respiratory infections	1	.041 (894 to 1196)	-58-6 (-65-1 to -50-8)	-51·4 (-59·0 to -42·2)
2523 (2210 to 2782)	3 Lower respiratory infections		3 Drowning	9	995 (887 to 1120)	-76·3 (-79·3 to -72·8)	-72·2 (-75·7 to -68·0)
1989 (1592 to 2213)	4 Congenital birth defects	]	4 Congenital birth defects		923 (778 to 1112)	-53·3 (-61·5 to 37·2)	-45·2 (-54·8 to -26·3)
1983 (1814 to 2203)	5 Leukaemia	]	5 Leukaemia		743 (612 to 866)	-62.4 (-69.2 to -54.9)	-55·9 (-63·9 to -47·0)

	55 Conflict and terrorism		71 Measles			Injuries	

Top 25 causes of death in the WHO European Region, age 5-9 years, both sexes, 1990 and 2016

UNIVERSITY OF TWENTE. 201800366, PRODUCT SAFETY-SMART PRODUCTS, Enschede, The Netherlands. Dr. Mohammad Rajabali Nejad. 13/08/2019

#### Accidents on Road

- Are under the influence off quality of road vehicles, safety functions,...
- Traffic management system, more controls,...
- Regulations well enforced and applied
- Driving culture

Figure 4.1. Traffic fatalities for selected countries (Evans, 2004). Reproduced with permission from Evans L., Traffic Safety (2004), Bloomfield, MI: Science Serving Society. © Leonard Evans.

#### Accidents in Elderly

Injury Mechanism	ER	Averag e costs €	Total Costs (M€)	Products involved (cause of accident, cause of injury, otherwise involved)
Fall, among which	89.000	5400	510	
- trip over	17.000	4200	75	Treshold, furniture
- fall from stairs/ladder	10.000	3900	42	Ladders and steps
- fall from heigth	7.200	5900	45	Bed, Chair
- slip	6.600	4300	30	Paving, Floor
- sprain	6.400	2600	17	Kerb, Tile
- by disease	3.600	6400	25	
Cut to object	6.400	1000	6,7	Tools, knife
Hit to object	4.500	1200	5,2	Door, furnitute
Hit by object	3.700	1300	4,7	Car door, tools
Unusual object	2.800	1000	2,8	Splinter, fish bone
Entrapment	2.200	1300	3,0	(Car)Door

Source: Letsel Informatie System 2002-2006 (jaarlijks gemiddelde), Consument en veiligheid ism Erasmus Medisch Centrum Rotterdam. \*Directe medische kosten van een ongeval waarna een SEH-behandeling of Ziekenhuisopname is gevolgd.

# Accidents Young Children (0-4)

	ER	Average costs, €	Total costs, x 1000 €
Table	1.900	450	880
Bed	1.400	730	1.000
Couch	1.400	680	1.000
Chair	1.300	610	800
Slide, playground	1.200	840	1.000
Climbing frame	800	1.200	1.100
Closet	570	550	310
Swing	460	1.000	480
Kommode / changing	400	870	350
Car Door	350	430	150

### **Accidents in Home**

- Kitchen is often the most risky place @home
  - 12.000 accidents a year
  - 41% Cuts (knives, kitchen tools, glass)
  - 27% Falls (kitchen steps, tripping)

Just a prank

16% Burns (hot liquid, cooking)

Source: Letsel Informatie System 2002-2006 (jaarlijks gemiddelde), Consument en veiligheid ism Erasmus Medisch Centrum Rotterdam. \*Directe medische kosten van een ongeval waarna een SEH-behandeling of Ziekenhuisopname is gevolgd.

#### Safety in Product Lifecycle

- Safety in full product life-cycle
  - Needs (requirements)
  - Design (functions)
  - Test (acceptance)
  - Implement (assembly)
  - Operation (use)
  - <u>Disposal</u> (disassembly)

#### Safety in Engineering Requirements

- Public become less tolerant to failures
- Big consequences for safety failure
  - Cost
  - Reputation
  - Customers
  - Market-share
  - Less tolerant public

#### Safety in Product Design Toy Example

- Safety in full product life-cycle
  - Needs
  - <u>The toy breaks easily</u>, <u>generating small parts</u>.
     <u>Small children could put the</u> <u>small parts in the mouth and</u> <u>choke</u>
  - The product does not comply with the requirements of the Toy Safety Directive

#### Safety in Engineering (Assembly)

Alphen aan den Rijn

#### Safety in Engineering Use

- Safety in full product life-cycle
  - Needs (requirements)
  - Design (functions)
  - Test (acceptance)
  - Implement (assembly)
  - Operation (use)

www.safety.fail

#### Safety in Engineering (Disposal)

#### Red Faces for Being Too Late

- Get informed of regulations
- Be aware of hazards in a system
- Determine the causes of those hazards
- Develop/ verify controls
- Monitor the system

Not a coat of paint!

#### Not after detail design!

#### French red faces over trains that are 'too wide'

🛉 📀 🈏 🗹 < Share

https://www.bbc.com/news/world-europe-27497727

#### Easy To Fix in the Beginning

- Share of faults per category
  - Primarily for IT projects
  - Based on research of Standish Group (1995), Scientific American (1994), NDIA (2003, 2006), DoD, ...
  - Easy fo fix in the beginning, very costly to fix at the implementation phase

# Early Design Decisions

# **Metrics for Designers**

Designers or Engineers
focus on functions and use
may overlook malfunction or misuse

#### **Designers' View**

#### Safety in Engineering (Design)

Ikea pet water dispenser, 2018

#### Who Dies First?

UNIVERSITY OF TWENTE. CuriousU, Risk management, Safety by Design, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019

#### **Technology or Safety?** Pull Push nnovation Standardizatid Time to Economic Regulate Quality industry growth market

UNIVERSITY OF TWENTE. CuriousU, Risk management, Safety by Design, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019
## **Dutch Design Week 2018**

- Beyond non-stop workers
- Already started developing feeling for them

• Humiliation?!

#### Success Framework For Netherlands Railways

Rajabalinejad, van Dongen, 2018, Framing Success: the Netherlands Railways Experience

UNIVERSITY OF TWENTE. CuriousU, Risk management, Safety by Design, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019

#### Success Framework For Netherlands Railways (NS)

#### Design Components for Safety

- Needs three basics elements of
  - people/humans
  - product/system
  - environment
- And three domains of
  - design
  - engineering
  - risk assessment
- Across the full product life-cycle

Rajabalinejad, 2017

# **Product/ System**

- System/ product
  - combination of components, internal interfaces

Safety Gate: Rapid Alert System for dangerous non-food products

Alert number	A12/0134/19		
Category	Hobby/sports equipment		
Risk level	Serious risk		
Product user	Consumer		
Product	Bicycle		
Brand	BTWIN		
Name	B'TWIN City bike		
Type / number of model	B*TWIN B' Original 900 Full Suspension Hybrid Touring, B'TWIN B' Original 500, B'TWIN B' Original 500 Hybrid Touring, B'TWIN B' Original 900 Hybrid Touring, B'TWIN VTC B' Original 700 Customable Hybrid		
Batch number / Barcode	Bicycles sold between 01.01.2016 and 31.08.2018		
OECD Portal Category	71000000 - Sports Equipment		
Description	City bicycle.		
Country of origin	Unknown		
Alert submitted by	Romania		
Risk type	Injuries		
Technical defect	There is a defect in the front mudguard that may block the wheel during use.		
Risk	This could cause the cyclist to fall off the bicycle and suffer injuries.		
Measures adopted by notifying country	Recall of the product from end users		
Company recall page:	http://-		

## System

Rome, Italy, 2018

## System+Human

- System
  - combination of components, internal interfaces
- System + human
  - human system interaction, user/ external interfaces

Safety Gate: Rapid Alert System for dangerous non-food products

Alert number	A11/0066/17		
Category	Childcare articles and children's equipment		
Risk level			
Product user	Consumer		
Product	Children's bicycle		
Brand	Romet		
Name	Unknown		
Type / number of model	<ol> <li>Diana 16Y (distributed: 18.09.2014 - 09.06.2016); 2.) Satto 16B (distributed: 18.09.2014 - 10.06.2016);</li> <li>Diana 16S (distributed: 24.08.2012 - 24.08.2016);</li> <li>Salto 16 (distributed: 01.09.2014 + 15.07.2016);</li> <li>Salto 16 (distributed: 01.09.2014 + 15.07.2016);</li> <li>Salto 16 (distributed: 01.09.2014 - 15.07.2016);</li> <li>Salto 12 (distributed: 26.08.2012 - 26.08.2016);</li> </ol>		
Batch number / Barcode	1.)5907782765447, 2.) 5907782765507, 3.) 5907782765453, 4.) 5907782765413, 5.) 5907782765491, 6.) 5907782765439 & 5907782765422		
OECD Portal Category	71000000 - Sports Equipment		
Description	Children's bicycles equipped with 12" or 16" wheels and additional side wheels (stabilisers), depending on the model.		
Country of origin	China		
Alert submitted by	Poland		
Risk type	Cuts, Injuries		
Risk	The nuts on the cranks have sharp edges. During riding or maintenance of the bicycle, these sharp edges may cut the user's leg or fingers. The bicycle seat posts have a quick-release mechanism which may cause the seat to become unstable during the ride and the child may lose its balance and fall. The product does not comply with the relevant European standard EN 8098.		
Measures adopted by notifying country	Recall of the product from end users		

# People

- Users assume that available products
  - have expected qualities and
  - are safe to use.
- These assumptions are
  - legally supported by authorities e.g. EU Commission

#### System+ Environment

- System
  - combination of components, internal interfaces
- System + human
  - human system interaction, user/ external interfaces
- System+environment
  - system environment interactions

Safety Gate: Rapid Alert System for dangerous non-food products

Alert number	A12/0497/15
Category	Machinery
Risk level	Serious risk
Product user	Consumer
Product	Electric bicycles
Brand	Baltik Vairas
Name	Unknown
Type / number of model	Ruhrwerk, Panther, Göricke, Böttcher, Crosswave, D-Cycle, Ebsen, Kristall, EBIKE Ultrasport, Spezi, MSA. The bicycle frame number is from 00022543 to 00049980 (frame numbering is not chronological);
Batch number / Barcode	Unknown
OECD Portal Category	71000000 - Sports Equipment
Description	Electric bicycles produced during the period 2012 - 2014, equipped with "REVA" rechargeable batteries.
Country of origin	Lithuania
Alert submitted by	Lithuania
Risk type	Burns, Fire
Risk	The batteries of the e-bikes can present defective sealing, which could result in the accumulation of humidity inside the battery and cause overheating and self-ignition.
Measures adopted by notifying country	Recall of the product from end users
Products were found and measures were taken also in	Denmark, Germany
Images

#### System + Environment Extreme Modes of Operation

- Safe in normal mode of operation
- Safe in foreseeable (not normal) modes of operation
- Safe (perhaps not functional) in extreme mode of operation
- See https://safety.productions

# **USE SCENARIOS**

- A product can be used by a user who
  - has not studied in engineering
  - is not a safety expert
  - has not her full attention while using the product
  - uses her (temporal) mental model

#### Safety Cube

UNIVERSITY OF TWENTE. CuriousU, Risk management, Safety by Design, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019

#### Hazard Assessment for System of Interest

	System requirements, functions, and behavior	Physical system (system-SoS/ environment relation)	Use/misuse scenarios (human-system relation)
Environment and super systems			
System		a two-wheels personal vehicle powered & steered by human	
sub-systems			

	System requirements, functions, and behavior	Physical system (system-SoS/ environment relation)	<i>Use/misuse scenarios (human-system relation)</i>
Environment and super systems		bicycle path, roads, crossing, traffic lights, infrastructure, and natural environment	
System		a two-wheels personal vehicle powered & steered by human	
sub-systems			

	System requirements, functions, and behavior	Physical system (system-SoS/ environment relation)	Use/misuse scenarios (human-system relation)
Environment and super systems		bicycle path, roads, crossing, traffic lights, infrastructure, and natural environment	
System		a two-wheels personal vehicle powered & steered by human	
sub-systems		two wheels, frame, pedals chain, tires may go flat	

	System requirements, functions, and behavior	Physical system (system-SoS/ environment relation)	Use/misuse scenarios (human-system relation)
Environment and super systems		bicycle path, roads, crossing, traffic lights, infrastructure, and natural environment	
System		a two-wheels personal vehicle powered & steered by human	cyclist cycles in a (non) specified path at night, rain, or cross roads, cyclist uses unassigned paths (shortcuts)
sub-systems		two wheels, frame, pedals chain, tires may go flat	

	System requirements, functions, and behavior	Physical system (system-SoS/ environment relation)	Use/misuse scenarios (human-system relation)
Environment and super systems		bicycle path, roads, crossing, traffic lights, infrastructure, and natural environment	driving behavior of other users on bicycle path or adjacent roads
System		a two-wheels personal vehicle powered & steered by human	cyclist cycles in a (non) specified path at night, rain, or cross roads, cyclist uses unassigned paths (shortcuts)
sub-systems		two wheels, frame, pedals chain, tires may go flat	

	System requirements, functions, and behavior	Physical system (system-SoS/ environment relation)	Use/misuse scenarios (human-system relation)
Environment and super systems		bicycle path, roads, crossing, traffic lights, infrastructure, and natural environment	driving behavior of other users on bicycle path or adjacent roads
System		a two-wheels personal vehicle powered & steered by human	cyclist cycles in a (non) specified path at night, rain, or cross roads, cyclist uses unassigned paths (shortcuts)
sub-systems		two wheels, frame, pedals chain, tires may go flat	cyclists sits on (side) saddle, inaccurate adjustment, stands on pedals, steers by one hand

	System requirements, functions, and behavior	Physical system (system-SoS/ environment relation)	Use/misuse scenarios (human-system relation)
Environment and super systems		bicycle path, roads, crossing, traffic lights, infrastructure, and natural environment	driving behavior of other users on bicycle path or adjacent roads
System	ergonomically safe, CE marking, meet the expected safety level, visible to other users	a two-wheels personal vehicle powered & steered by human	cyclist cycles in a (non) specified path at night, rain, or cross roads, cyclist uses unassigned paths (shortcuts)
sub-systems		two wheels, frame, pedals chain, tires may go flat	cyclists sits on (side) saddle, inaccurate adjustment, stands on pedals, steers by one hand

	System requirements, functions, and behavior	Physical system (system-SoS/ environment relation)	<i>Use/misuse scenarios (human-system relation)</i>
Environment and super systems	traffic regulations in Netherlands and Europe, control functions	bicycle path, roads, crossing, traffic lights, infrastructure, and natural environment	driving behavior of other users on bicycle path or adjacent roads
System	ergonomically safe, CE marking, meet the expected safety level, visible to other users	a two-wheels personal vehicle powered & steered by human	cyclist cycles in a (non) specified path at night, rain, or cross roads, cyclist uses unassigned paths (shortcuts)
sub-systems		two wheels, frame, pedals chain, tires may go flat	cyclists sits on (side) saddle, inaccurate adjustment, stands on pedals, steers by one hand

	System requirements, functions, and behavior	Physical system (system-SoS/ environment relation)	<i>Use/misuse scenarios (human-system relation)</i>

## FAULT TREE

- For modelling system performances
  - safety, reliability, maintainability, etc.
- Qualitative/ quantitative
  - estimated probability
- FT enjoys logic
  - And/ OR
- FT and FMEA
  - top <=> bottomn

## Naive Fault Trees

Rajabali Nejad, M., ISSC 2017, Albuquerque, USA

#### **Event Tree**

#### Example Event Tree for Tunnel Fire Scenario

#### Bowtie

#### see www.bowtie.nl

#### Failure Mode and Effect (FMEA) Analysis

## **FMEA Work Sheet**

Element/function:					
function:					
deviation	cause	P	consequence	counter measure	

# FMEA Worksheet

Г \_\_\_\_

Element/fur	nction: the escal	lator	system			
function: provide vertical transportation						
deviation	cause	Р	consequence	counter measure		
escalator moves fast	controller malfunctions		unexpected behaviour	test different scenarios		
	safety system failure		uncontrolled behaviour	use high reliability system		
	motor error		failure to function as expected	maintain the motors

### HOW SAFE IS SAFE ENOUGH?

- How safe is safe enough?
  - Main driver for insurance industry
  - How much am I willing to spend to protect myself from accidents (including lawsuits and lost business revenue)?"
- An example of safety cost
  - After the 2010 BP <u>Deepwater Horizon</u> offshore oil platform explosion and oil spill in the Gulf of Mexico, BP has budgeted around \$40 billion for paying out of claims and compensation.

## A Quick Recipe For Safety Engineering

Modify the system if the risk is unacceptable

- 1. Design out the hazard
- 2. Use safety devices
- 3. Use warning devices
- 4. Special procedure and training

### Example Hazards See ISO 12100, ANNEX B

UNIVERSITY OF TWENTE. CuriousU, Risk management, Safety by Design, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019

#### Example Hazardous Situation

Phase of life cycle	Example situations	Phase of life cycle	Example situations
Transport	lifting, loading, packing, unloading, unpacking	Operation	Feeding, filling, loading/ unloading, removing waste, jams, supervision
Assembly	Assembly, connecting to power, fixing, running, testing	Cleaning	Housekeeping, Iubrication, resetting,
Setting	Adjustment, feeding, loading, verification	Fault-finding	Removal of parts, fault-finding, recovering from jam, replacement of parts, resetting

UNIVERSITY OF TWENTE. CuriousU, Risk management, Safety by Design, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019

## Remove Hazards Design

- Suitable choice of design, eliminate hazards by
  - hazards by gap safety, avoiding sharp edges & corners, limiting actuation force/noise/vibration, proper materials, appropriate technology, visible controls, isolation
  - hazardous behaviour such as failure to stop moving parts, start/stop mechanism, safety functions, high quality/ reliability

# Protect User/Product

- If Step 2 is not possible, reduce hazard of moving parts by
- fixed guards, interlocking movable guards, adjustable guards, protective devices
- sensitive protective equipment e.g. laser scanners, trip bars...
- connecting guards properly to control system
- isolating the machine from all energy sources

# Inform Users

- If Steps 2 and 3 are not possible, inform the user about
  - operating procedure
  - safe working practices
  - sufficient information
  - protective equipments

# Take Away

UNIVERSITY OF TWENTE. CuriousU, Risk management, Safety by Design, Enschede, The Netherlands. Dr.Ir. Mohammad Rajabali Nejad. 13/08/2019
